

# FAUNA

ACTIVITY SHEET 4

## BEACHES OF SENTOSA

Sentosa has **three** main beaches.  
Can you name them all?

# OUR BEACHES ARE ALIVE!

There are many animals that share the beaches with us. Some of them have made the sandy shores their home, creating burrows like crabs, or being buried in the sand like sea stars. Other animals live in the water, like fishes. Some animals, like the otters, love playing in the sand and swimming in the water, much like we do.

Hollow-cheeked Stonefish

Striated Heron

Halfbeaks

Jellyfish

Indo-Pacific Humpback Dolphin

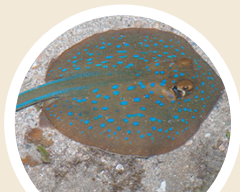

Seagrass

Sea Star

Fiddler Crab

Blue-spotted Fantail Ray

Collared Kingfisher

Horseshoe Crab

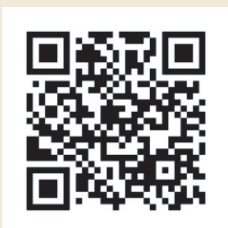

Dubious Nerites

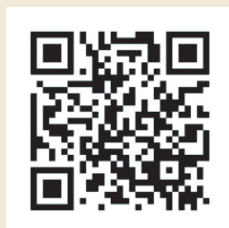

Smooth-coated Otters

Sentosa's Beaches

Marine Habitats

There are **12 animals** in this picture. Can you find them all?

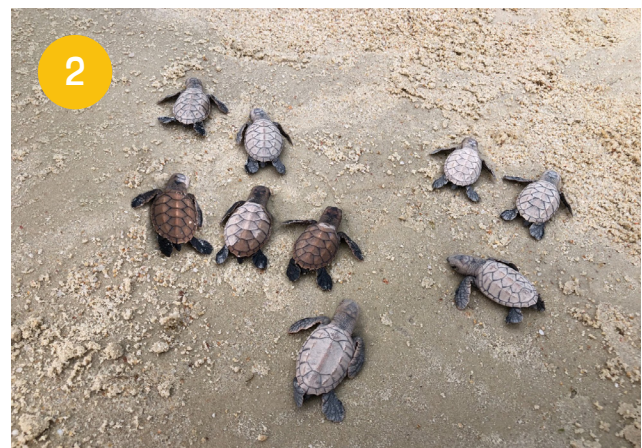

# TURTLES ASHORE!

Hawksbill Turtles live in the waters around Singapore. The turtles feed on marine animals such as sponges and jellyfish. After leaving their nests as newly hatched turtles, they spend all their time at sea. Only the adult females will return to shore to nest.

Each nest can contain up to 200 eggs, sometimes more. Every little baby turtle is important as these turtles are critically endangered around the world. In Sentosa, we protect their nests and check the babies before we release them back to sea.

## Spot the differences!

Compare the two pictures below and spot all 8 differences.

How many baby turtles are there in **Picture 1**? \_\_\_\_\_
